From Routledge : **Green Households: Domestic Consumers, the Environment and Sustainability** before purchasing it in order to gage whether or not it would be worth my time, and all praised Green Households: Domestic Consumers, the Environment and Sustainability:

Households are one of the main sources of waste and of other environmental impacts. This is a study of domestic consumption. Drawing on empirical research largely from The Netherlands, it takes households as consumer units and examines the entire household metabolism. This includes the way domestic demand can influence where and how goods and services are produced, resource flows through households, and the differential impacts of different lifestyles. It shows both what would constitute sustainable domestic consumption and how far there is to go to achieve this.

'The book is accessible to a wide variety of readers... It should be interesting particularly to policy-makers and environmentalists.' Sustainable Development About the Author Klaas Jan Noorman is Coordinator of the HOMES

research programme, part of the Dutch National Foundation for Scientific Research's Priority Programme on Sustainability and Environmental Quality. Ton Schoot Uiterkamp is Professor of Environmental Sciences at the Centre for Energy and Environmental Studies, University of Groningen, The Netherlands, and was formerly head of department at the Environmental Division of The Netherlands Organisation for Applied Scientific Research (TNO).
