From Island Press : Human Well-Being and Economic Goals (Frontier Issues in Economic Thought) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Human Well-Being and Economic Goals (Frontier Issues in Economic Thought):

1 of 2 people found the following review helpful. Analytical summaries of the best of the literature By Kenneth Prewitt
The Frontier Issues in Economic Thought summaries, along with the overview essays, provide a markedly different

service from the standard collection of abstracts. The series will benefit not only scholarly work but the application of our best thinking to the problems of the times. Kenneth Prewitt, President, Social Sciences Research Council

What are the ends of economic activity? According to neoclassical theory, efficient interaction of the profit-maximizing "ideal producer" and the utility-maximizing "ideal consumer" will eventually lead to some sort of social optimum. But is that social optimum the same as human well-being? *Human Well-Being and Economic Goals* addresses that issue, considering such questions as: Does the maximization of individual welfare really lead to social welfare? How can we deal with questions of relative welfare and of equity? How do we define, or at least understand, individual and social welfare? And how can these things be measured, or even assessed? *Human Well-Being and Economic Goals* brings together more than 75 concise summaries of the most significant literature in the field that consider issues of present and future individual and social welfare, national development, consumption, and equity. Like its predecessors in the *Frontier Issues in Economic Thought* series, it takes a multidisciplinary approach to economic concerns, examining their sociological, philosophical, and psychological aspects and implications as well as their economic underpinnings. *Human Well-Being and Economic Goals* provides a powerful introduction to the current and historical writings that examine the concept of human well-being in ways that can help us to set goals for economic activity and judge its success. It is a valuable summary and overview for students, economists, and social scientists concerned with these issues.

About the Author Frank Ackerman is senior research associate at the Global Development And Environment Institute at Tufts University. David Kiron is research associate at the Global Development And Environment Institute at Tufts University. Neva R. Goodwin is co-director of the Global Development And Environment Institute at Tufts University. Jonathan M. Harris is senior research associate at the Global Development And Environment Institute at Tufts University.
